(54) Title: MAMMALIAN CELL LINES MODIFIED FOR THE PRODUCTION OF RECOMBINANT GLYCOPROTEINS

(57) Abstract: Novel, genetically modified
mammalian cell lines are described,
which can produce glycoconjugates the
oligosaccharide portions of which are more
similar to the human one than those of the
same glycoconjugates produced by cells
which have not been genetically modified.
The lines in question can be used for the
production of recombinant glycoconjugates
which are of therapeutic interest, in particular
for the production of glycoproteins for use
in human therapy, since the glycoconjugates
produced in these modified lines have a
lower immunogenic potential for man than
corresponding glycoconjugates produced
in cells which have not been genetically
modified.
